

WHAT IS CLAIMED IS:

1. A golf ball comprising a large number of dimples on a surface thereof,

wherein a percentage, to a total number of the dimples, of

a number of the dimples in which a first curved surface is provided from a position placed downward by 85% of a depth to a position placed downward by 100% of the depth in a direction of the depth from a dimple edge and a second curved surface is provided from a position placed downward by 20% of the depth to a position placed downward by 50% of the depth in the direction of the depth from the dimple edge, and a ratio ($R1/R2$) of a radius of curvature $R1$ of the first curved surface to a radius of curvature $R2$ of the second curved surface is 5 to 55 is 20% or more.

2. The golf ball according to claim 1, wherein a distance F between the deepest portion of the dimple and a phantom sphere is 0.10 mm to 0.60 mm.
